

Designed with “Built-in” Redundancy!

“Redundancy Increases Safety”... The searchlight is composed of a 7-LED POD and a 3-LED POD totaling 10 LED’s. If an LED fails, there are still 9 more available to produce a bright beam! In addition... each POD is powered by its own separate electronic circuit board. So, if an electronic board fails, the other POD will still project a bright beam, even in “Back-Up Mode.” This design ensures that your searchlight will always be operational during an emergency.
