

Designed with “Built-in” Redundancy!

“Redundancy Increases Safety”... The searchlight is composed of Qty(3) 7-LED POD’s and Qty(3) 3-LED POD’s totaling 30 LED’s. If one LED fails, there are 29 more which will produce a bright beam! In addition... each one of the POD’s is powered by its own separate electronics. So, if an electronic board fails, all of the other POD’s will still project a bright beam, even in “Back-Up Mode.” This design ensures that your searchlight will always be operational during an emergency.
